## Project Design Phase - I

## **Solution Fit**

## **SMART FARMER – IOT ENABLED SMART FARMING APPLICATION**

**Team ID** 

AS 1. Customer Segment(S) 6. Customer Constrains 5. AVAILABLE SOLUTIONS cs Who is your customer? i.e. working parents of 0-5 y.o. kids What constraints prevent your customers from taking action or limit their choices of solutions? i.e. spending power, budget, no cash, network connection, available the problem, or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? i.e. pen and paper Using many sensors is difficult. An unlimited The irrigation process is automated using IoT. The customer for this product is a farmer Meteorological data and field parameters who grows crops. Our goal is to help them, or continuous internet connection is were collected and processed to automate monitor field parameters remotely. This required for success. the irrigation process. Disadvantages are product saves agriculture from extinction. efficiency only over short distances, and difficult data storage.

Which jobs to be done (or problems) do you address for your customers? There could be more than one; explore different sides.

The purpose of this product is to use sensors to acquire various field parameters and process them using a central processing system. The cloud is used to store and transmit data using IoT. The Weather API is used to help farmers make decisions. Farmers can make decisions through mobile applications.

2. JOBS-TO-BE-DONE / PROBLEMS J&P

9. PROBLEM ROOT CAUSE
What is the real reason that this problem as

What is the real reason that this problem exists? What is the back story behind the need to do this job?

Frequent changes and unpredictable weather and climate made it difficult for farmers to engage in agriculture. These factors play an important role in deciding whether to water your plants. Fields are difficult to monitor when the farmer is not at the field, leading to crop damage.

7. BEHAVIOUR

RC

What does your customer do to address the problem and get the job done? i.e. Directly related: find the right solar panel installer, calculate usage and banefits; indirectly associated: customers spend five time on volunteering work (i.e. Greenpeace)

PNT2022TMID12911

Use a proper drainage system to overcome the effects of excess water from heavy rain. Use of hybrid plants that are resistant to pests.

SL CH 3. TRIGGERS TR 10. YOUR SOLUTION 8. CHANNELS OF BEHAVIOUR 8.1 ONLINE What kind of actions do customers take online? Extract online channels from 47 What triggers customers to act? i.e., seeing their neighbor instal solar panels, reading about a more efficient solution in the news 8.2 OFFLINE
What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development. Farmers struggle to provide adequate irrigation. Inadequate water supply reduces yields and affects farmers' profit levels. Farmers have a hard time ONLINE: Providing online assistance to the farmer, Our product collects data from various types in providing knowledge regarding the pH and moisture level of the soil. Online assistance to be predicting the weather. of sensors and sends the values to our main server. It also collects weather data from the provided to the user in using the product. Weather API. The final decision to irrigate the crop is made by the farmer using a mobile application. OFFLINE: Awareness camps to be organized to 4. EMOTION'S: BEFORE / AFTER EM teach the importance and advantages of the How do customers feel when they face a problem of a job and afterwards? i.e. lost, insecure > confident, in control - use it in your communistrategy & design. automation and IoT in the development of BEFORE: Lack of knowledge in weather forecasting → Random decisions → low yield. AFTER: Data from reliable source → correct decision → high yield.
